Deepraj Evane

Software Engineer

LeetCode: [u/evanedeepraj/](#)
[github.com/d9eepr](#)
[linkedin.com/in/deeprajevane/](#)

Results-driven software engineer with expertise in building scalable, performant systems using advanced data structures and algorithms. Proficient in delivering high-quality solutions with immediate business impact, leveraging object-oriented models, and cutting-edge technologies to simplify real-world problems.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, Python, C, C++
Web Development: Spring Boot, ReactJS, Angular, HTML, CSS, MySQL, MongoDB
Tools: Git, Jenkins, Docker, Grafana

TECHNICAL EXPERIENCE

Engineer **Nov 2024 — Present**
NucleusTeq *Indore*

- Architected an end-to-end Learning Management System (LMS) web application using a microservices-based architecture to manage courses and user lists seamlessly.
- Integrated GraphQL for efficient data querying across microservices, reducing latency by 35%, and implemented real-time tracking of user progress for advanced analytics in the admin dashboard.
- Leveraged Google Cloud Platform (GCP) to optimize cloud infrastructure for high efficiency, scalability, and reliability, ensuring smooth operation of distributed services.

Graduate Intern / PTIE **June 2023 — May 2024**
DELL *Pune, Bangalore*

- Team of five members developed a periodically running an end-to-end Automation testing platform, using Jenkins as a scheduler in a containerize appliance docker. **Led the web development** for displaying the results through the MERN.
- Developed a User interface for Testing platform which contains result of periodically run of Jenkins Scheduler using React JS.
- Created API's using GraphQL which helps in **reducing data fetch time from 10 sec to under 2 sec**.
- Ensured **seamless integration of multiple graphs** using Grafana which helps in understanding the performance of the platform.

Cloud & Infra Engineer **Nov 2020 — Sept 2022**
Larsen & Toubro Infotech Limited *Remote*

- Worked on a comprehensive banking project utilizing Spring Boot and Angular. Lead the Back end development using Spring Boot & MYSQL ensuring a **faster api responses**. Collaborated in designing and implementing the Frontend with Angular.
- Worked in SOA Middleware and Security Project. Upgraded and restructure entire end to end middleware and Decreases around 90% vulnerability and security issues by removing vulnerability and applied patches all over the Middleware environment.

EDUCATION

Mtech Artificial Intelligence, *Maulana Azad National Institute of Technology* Sept 2022 - July 2024

- Research: Published a research paper Plant leaf disease deteciton using deep Learning. Developed a **low-end device-compatible plant leaf disease detection system**. Created a Mobile Applications for real time plant leaf disease detection by capturing the image or uploading it from storage.

Bachelor of Engineering , *Institute of Engineering & Technology, Indore* July 2016 - Oct 2020

- Member of Computer society of India club where actively participated in college coding events.

PROJECTS

Testing Platform: **[React JS, Typescript Grafana, MongoDB, Flask API server, Jenkins, Python]**

- Developed an automation testing framework that executed over 200 tests per cycle, utilizing Jenkins for scheduling and integrating Cypress and Pytest scripts within a Docker environment to enhance reliability.
- Actively contributed to the architecture and design of project, improving codebase maintainability.

Sorting Algorithm Visualizer: **[Code] [Demo] [React, JavaScript, GIT]**

- Engineered an interactive visualizer for sorting algorithms, including QuickSort and MergeSort; enabled users to visualize 30+ iterations of data arrangements in real-time, enhancing understanding of algorithm efficiency.
- Allows users to observe the step-by-step process of various sorting techniques.
- Enhanced understanding of algorithm efficiency and comparison through real-time visualization.

Flipkart Clone : **[Code] [React JS, MongoDB, Flask, Python]**

- Developed a full-featured e-commerce platform replicating Flipkart's functionalities. Built a responsive user interface using React JS, implementing product browsing, search. Applied abstraction principles in designing modular classes and implemented complex business logic for dynamic features like product sorting and filtering.
- Ensured seamless interaction between frontend and backend, optimizing data flow and application performance.
