SUMMARY

Enthusiastic Software Development Engineer with over 6 years of experience dedicated to creating scalable, data-driven solutions that empower organizations and enhance user experiences. Committed to leveraging advanced technologies, including Python, Golang and AWS, to design and develop secure and efficient systems. A collaborative leader passionate about mentoring teams and driving cross-functional initiatives that translate complex requirements into impactful software products, fostering a culture of excellence and continuous improvement.

EXPERIENCE

3K Technologies 📅 Nov 2018 - Present 📍 Bengaluru, Karnataka

Software Development Engineer - III

- Architected a serverless authentication service with AWS, ensuring secure, scalable user management.
- Took leadership in the absence of the team lead, guiding the team to project success.
- Developed core components using Golang concurrency, leveraging goroutines and channels for efficient synchronization.
- Led data-driven development, translating complex physics-based models into functional software.
- Mentored interns and junior engineers, fostering growth through code reviews and best practices.
- Collaborated with product owners to refine requirements and deliver aligned solutions.
- Managed AWS cloud solutions with automated Jenkins deployments and Docker containerization.

Software Development Engineer - II

- Developed and integrated RESTful APIs and SSE for real-time data streaming and interaction.
- Led data acquisition and built simulation components with SCADA Ignition, implementing an OPC server for real-time synchronization.
- Created dynamic dashboards with Plotly Dash for real-time data visualization and analysis.
- Integrated third-party weather data (Solcast, EnergyPlus) to enhance real-time simulation insights.
- Developed CLI and GUI applications to streamline user interaction and system control.
- Owned multiple modules, overseeing their design, development, and integration into the system.

Software Development Engineer

- Developed Python and Django web applications with a focus on code quality and performance.
- Participated in the full software development lifecycle, from requirements to deployment and maintenance.
- Contributed to the design and development of a Decision Control System Module.
- Implemented unit and system testing to meet employer and customer specifications.
- Contributed to documentation of technical specifications, APIs, and system architecture.

PROJECTS

Pressure Vessel based Energy System

An innovative Energy Internet solution for renewable energy storage and distribution using compressed air. It collects data through SCADA and Ignition platforms, featuring a complete set of microservices to deliver highly Renewable, Available, Inexpensive, and Distributed energy solutions.

Speech Emotion Recognition

An Emotion Detection system using machine learning models to identify emotions in speech signals, such as calm, happy, sad, and angry, by decoding emotional expressions from audio.

SKILLS

Python, Go

HTML, CSS, Bootstrap, Javascript

Flask, Django, DRF, PySpark

Click CLI, PyQt GUI, SCADA Ignition

PostgreSQL, MongoDB, DynamoDB

AWS, Azure Databricks, ADLS, ADF

Jenkins, Docker, Gunicorn, Nginx

Plotly, Celery, Redis, Selenium, BS4

Pandas, Numpy, Jupyter, ML Models

Github, Gitlab, Jira, Trello, Ms Teams

EDUCATION

BE in Computer Science & Engineering

HSIT, VTU University

📅 2014 - 2018 📍 Belagavi, Karnataka

CERTIFICATIONS

🌩 AWS Certified Developer Associate
Udemy

📚 Complete SQL and Databases Bootcamp
Udemy
