Education

Maulana Azad National Institute of Technology

Master of Technology

Sept 2022-August 2024

Bhopal, Madhya Pradesh

- **Relevant Coursework:** Advance Data Structures and Algorithms (C++), Machine Learning
- **Research Work:** Developed a low-end device-compatible plant leaf disease detection system using Deep Learning.

Institute of Engineering & Technology

Bachelor of Engineering

July 2016-Oct 2020

Indore, Madhya Pradesh

- **Relevant Coursework:** Data Structures and Algorithms (C++), DBMS, Computer Networking
- **Project Work:** Created multiple projects like Library management system, android application for restaurant management using C++ and Java.

Experience

Dell Technologies

Graduate Intern

Jun 2023 – May 2024

Pune, Maharashtra

- Developed a testing platform that automates script execution for embedded systems and appliances
- Implemented a front-end interface using React.js and integrated it with MongoDB for result storage.
- Participated in code reviews and contributed to improving coding standards

Larsen & Toubro Infotech Limited

Software Engineer Intern

Nov 2020 – Sept 2022

Pune, Maharashtra

- Worked on a comprehensive banking project utilizing Spring Boot and Angular. Lead the Back end development using Spring Boot & MYSQL ensuring a **faster api responses**. Collaborated in designing and implementing the Frontend with Angular. Ensured seamless integration between the front end and back end which ensures optimized performance and better user experience.
- Worked in SOA Middleware and Security Project. Upgraded and restructure entire end to end middleware and Decreases around 90% vulnerability and security issues by removing vulnerability and applied patches.

Projects

Testing Platform | React JS, Typescript Grafana, MongoDB, Flask APIserver, Jenkins, Python

- Team of five members created a periodically running an end-to-end Automation testing platform, using Jenkins as a scheduler in a containerize appliance docker with the help of automation scripts and store data in MongoDB. This ensures the execution of automation scripts in cypress and pytest on appliances. **Led the web development** for displaying the results through the MERN.
- Developed an UI for Testing platform which contains result of periodically run of Jenkins Scheduler using React JS.
- Created API's using GraphQL which helps in **reducing data fetch time from 10 sec to under 2 sec**
- Ensured **seamless integration of multiple graphs** using Grafana which helps in understanding the performance.

Custom UEFI Diagnostic Application | C,EDK2

- Designed and implemented diagnostic routines in C using the UEFI Development Kit (EDK2).
- Created diagnostic checks for CPU performance, memory health, and peripheral device status.
- Leveraged UEFI Boot Services for accessing hardware and performing memory and CPU diagnostics.
- Integrated I/O operations to capture and log system errors and hardware faults. Used QEMU and OVMF firmware to test and simulate diagnostics on virtual machines, ensuring robustness before deployment on physical hardware.
- Provided error logging mechanisms that capture diagnostic results and store them in NVRAM or external storage for post-boot analysis.

Technical Skills

Languages: C, Assembly,Java, C++,JavaScript

Tools & Technologies: UEFI, BIOS, Embedded Software/Firmware, Flask, React, Jenkins, Docker, Git

Concepts: Compiler, Operating System, Virtual Memory, Cache Memory, API, Database Normalization, Agile Methodology, Cloud Computing
