

Aayushi Gopawar

Professional Summary:

- Having 2.5 years of experience on working in the field of Software Development.
- Experience with working on Bigdata tech stack - Databricks, GCP, Pyspark, SQL.
- Experience with working on Amazon Web Services including Apache Airflow, S3 buckets, Amazon Redshift, Athena, Glue, CloudWatch.
- Worked with file formats like JSON files, CSV, TSV files, Parquet files.
- Experience in working on GitHub for tracking code changes and deployment. And GitHub Actions for continuous and automated delivery.
- Skilled in using ETL tools like Apache Airflow for Streamlining Data Transformation and Loading Processes Using Apache Airflow
- Successfully implemented alerting and monitoring for the Data Ingestion Pipeline. Alerts being sent on slack channel and outlook to the respective stake holders.
- Worked with different data loading strategies like Historical load and Incremental Loads.
- Programming skills in Python language.
- Utilizing collaboration tools such as Jira and Confluence for effective teamwork.
- Experience on working on an Agile Methodology.
- Understanding of Spark Architecture including Spark-SQL, Data Frames and Pyspark.
- Hands on experience with Jupyter Notebook and Databricks.

Technical Skills:

- Amazon Web Services (Managed Workflow for Apache Airflow, S3 bucket, Amazon Redshift, Athena)
- Language – Python, Basic Java
- SQL
- Pyspark, Spark-SQL
- Databases like Postgres, Amazon Redshift
- Computing platforms – Jupyter Notebook and Databricks.

Professional Experience:

Nucleusteq | Client- Petsmart | Data Engineer
May 2024 – Present

Work Experience:

- Working on various requirements from Clients
- Majorly working on Customer related data.
- Worked on developing and deploying new features to customer tables for business use cases.

Nucleusteq | Client- AAALifeInsurance | SDE2

July 2022 – May 2024

Work Experience:

- Worked in development phase of a JSON parser project. Created scripts to parse jsons into tsv files.
- Streamlining Data Transformation and Loading Processes from Complex JSON Files to Redshift Using Apache Airflow
- Worked on writing pytest for unit testing.
- Integrating Slack and email to send alerts on failure of the pipeline for proper monitoring.
- Created Airflow dags for execution of the pipeline.
- Github Actions for deployment.
- Integrating ServiceNow to raise incidents on failure.

Responsibilities:

- Engage with Team Lead to understand the requirement and worked accordingly.
- To validate successful run of data ingestion pipeline.
- Monitoring the Scheduled jobs and if failed worked on fixing it.
- Perform unit testing and data validation.
