

Dikshita Patidar

(Software Engineer)

Objective

Focused on leveraging technical skills and software engineering expertise to develop innovative and efficient solutions that enhance organizational performance and deliver impactful results.

Professional Summary

- Software Engineer with developed skills in Big Data technologies, Python, SQL, Docker, and full-stack web development.
 - Skilled in creating frameworks for data processing and analytics, maintaining data quality and delivering actionable insights.
 - Adept in database management with expertise in relational databases (MySQL, PostgreSQL)
 - Proficient in building and managing full-stack web applications that enhance business operations and provide an exceptional user experience.
-

Technical Skills

Technology: Big Data Processing (PySpark), Data Pipelines, ETL

Programming Languages: Python, SQL, PySpark, React, Flask

Tools: Docker, Github, VS code, Jupyter Notebook, MySQL, PostgreSQL, Linux, Google Docs

Microsoft Suites: Microsoft Word, Excel, PowerPoint

Business Skills:

- Agile and Scrum methodologies, Sprint Planning and Review
 - Effective Communication, Adaptability and Strong Interpersonal Skills
-

Professional Experience

1. Big Data Processing Framework with PySpark

(NucleusTeq Major Capstone Project)

Technologies Used: Python, PySpark, PostgreSQL, Matplotlib, Plotly, Git, Docker

- Developed a comprehensive framework for Big Data Processing using PySpark, enabling efficient data ingestion, cleaning, and transformation from various file formats.
- Created reusable utility functions streamlining processes and enhancing code maintainability across different DataFrames.
- Leveraged data visualization tools to generate insightful reports, facilitating data-driven decision-making for stakeholders.
- Deployed the solution within a Docker container environment, ensuring scalability and consistency across development and production settings.

Key Deliverables:

- Python/PySpark scripts automating ETL process.
 - Visualizations showcasing key insights and patterns.
 - Data quality reports comparing the changes before and after data processing.
 - Comprehensive documentation outlining the framework's architecture and implementation.
-

2. Reimbursement Portal

(NucleusTeq Minor Capstone Project)

Technologies Used: Python, Flask, MySQL, HTML, CSS, JavaScript, Git, Docker

- Created an easy-to-use platform that simplifies the applying tracking, approval, and submission of employee reimbursement claims for office supplies, travel, and relocation.
- Admin, Manager, and Employee roles in a secure role-based access control system were implemented to handle claims, guaranteeing effective workflows and data protection.
- Facilitated smooth user interaction while ensuring adherence to business reimbursement policies, including category-specific spending caps..
- Concentrated on developing a solid backend system to effectively manage the workflows for claims and approvals.

Key Deliverables:

- A responsive web-based user interface that allows users to submit reimbursement claims and monitor their statuses.
- UML diagram explaining the workflow of the project.

Education

Bachelor of Technology in Computer Science and Engineering | 2020-2024

Medi-Caps University, Indore (M.P.)

CGPA: 9.01/10

XII Board | 2018-2020

Shrikanwartara Public Higher Secondary School, Mandleshwar (M.P.)

Percentage: 87.40%

X Board | 2018

Paramount Academy Kasrawad (M.P.)

Percentage: 86.80%

Acknowledgment

I hereby declare that all the information provided above is true to the best of my knowledge and belief.
