

Harsh

Professional Experience:

- 6+ years experience in automating and managing cloud infrastructure using various cloud platforms. Proficient in building CI/CD pipelines with Jenkins and skilled in configuration management and automation using Ansible.
- Experience working on all latest Devops tools and operating systems.

PROJECTS

Financial Services, On-Site (01/2024 - Present)

- Automation: Automated build creation and deployment processes across various environments, improving developer workflows, scalability, and overall deployment speed.
- Source Code Management: Managed GitHub repositories and permissions, including branching strategies and tagging.
- Configuration Management: Leveraged Ansible for configuration management and automated job execution using ansible-playbook.
- CI/CD Pipelines: Designed and maintained fully automated CI/CD pipelines using Jenkins, enabling seamless code deployment and integration.
- Cloud Technologies: Proficient in GCP, GKE, and Argo CD, implementing GitOps workflows and enhancing scalability for cloud-native applications.

Data Migration –

Business Consulting, (10/2021 - 12/2023)

- Migrated On-Premises data from various source systems into the cloud. Analysed and Migrated airflow dags, hql and python script into Pyspark on DataBricks.
- Automated and managed AWS cloud infrastructure, resulting in improved scalability and efficiency.
- Built effective CI/CD pipelines with Jenkins, streamlining the software development process. Utilized Ansible for configuration management and automation, enhancing operational productivity.
-

Financial Services (08/2020 - 10/2021)

- Created ETL pipeline using Pyspark, leveraging the delta lake architecture for efficient data processing.
- Automation of build creation and deployment of these builds in various environments.
- Improving developer workflow, increasing scalability, and optimizing speed.

- Managed GitHub repositories and permissions, including branching and tagging Automation tools: Ansible, Automate jobs using ansible-playbook.
- Jenkins: Create and maintain fully automated CI/CD pipelines for code deployment.

Financial Services (11/2019 - 08/2020)

- Built and deployed Docker containers to break up monolithic app into microservices.
- Improving developer workflow, increasing scalability, and optimizing speed.
- Managed GitHub repositories and permissions, including branching and tagging
- Automation tools: Ansible, Automate jobs using ansible-playbook.
- AWS services administration: IAM, VPC, Route 53, EC2, S3
- Jenkins: Create and maintain fully automated CI/CD pipelines for code deployment

System Administration (07/2017 - 11/2019)

- Deployed Grafana for monitoring all production or staging servers.
- Constantly monitored the up-time of the infrastructure using the status of all components sent by the CHECKMK client.
- Server Maintenance & Infrastructure Monitoring Built and deployed Docker containers to break up monolithic app into microservices
- Improving developer workflow, increasing scalability, and optimizing speed.
- Managed GitHub repositories and permissions, including branching and tagging Automation tools: Ansible, Automate jobs using ansible-playbook.
- AWS services administration: IAM, VPC, Route 53, EC2, S3
- Jenkins: Create and maintain fully automated CI/CD

Automation of Government University(MPMSU) (Mar'17 - Mar'18)

- Excellence knowledge in Red Hat Enterprise Linux (Installation & Administration).
- Good knowledge of Computer Hardware, Networking, Red Hat Linux 6, 7.
- Good knowledge in administering services like FTP, DHCP, SCP, DNS etc.
- Good knowledge of monitoring servers through Open source tools like Nagios.
- Monitor network communication. Create a backup and recovery policy.
- Installation and configuration of different
- UNIX flavors, Applications and updating Patches. Scheduling various jobs through Crontab.
- Installing and configuring new hardware and software.
- Remote administration and monitoring of the Server using tools like SSH, FTP.
- Good knowledge of Managing User and Group administration in Linux.
- Installation & configuration of Yum Server as well as client.

- Adding, removing or updating user account information, resetting access and permissions. Monitoring network activities & optimizing the performance of the Network.
- All knowledge of LVM (Logical Volume Manager). LVM based OS installation.
- Excellence in Maintaining & troubleshooting Network related tasks.
- Ensuring that the network infrastructure is up and running

EDUCATION

Bachelor Degree: Computer Science & Engineering RGPV, Bhopal, India 2013

Areas Of Expertise

- Linux
- Nagios
- Aws
- Jenkins ,● Build
- Ansible ● Lamp
- Apache ● Docker
- Redhat Linux
- Linux System Administration ● Centos
- MySQL Database Administration ● Ubuntu
- Linux Administration ● Aws
- DevOps
- Kubernetes ● Openshift
- Terraform ● Helm
- Grafana

Certification

- CCNA ● RHCSA
