

Himanshu Dhoke

Objective

Motivated and detail-oriented Data Engineer specializing in Python, SQL, Spark, Google cloud, and Shell Scripting. Seeking to leverage my expertise in building and optimizing data pipelines to contribute to data-driven decision-making and enhance business operations. Eager to collaborate with cross-functional teams and continue growing my skills in cloud technologies and big data solutions to drive impactful results.

Professional Summary

Having 2.5 years of experience working in the field of Data Engineering. Understanding of Spark Architecture including Spark-SQL, RDD, Data Frames and PySpark. Experience with working on Bigdata tech stack - Databricks, GCP, Pyspark, SQL. Worked with file formats like JSON files, CSV, TSV files, Parquet files. Experience in working on GitHub for tracking code changes and deployment. And GitHub Actions for continuous and automated delivery. Successfully implemented alerting and monitoring for the Data Ingestion Pipeline. Alerts being sent on Outlook and Service Now to the respective stake holders. Worked with different data loading strategies like Historical load and Incremental Loads. Programming skills in Python language. Utilizing collaboration tools such as Jira and Confluence for effective teamwork. Experience on working on an Agile Methodology.

Technical Skills

Technology

- Data Engineering
- Data Pipelines
- ETL
- Batch Processing and Stream Processing

Programming

- Python
- Pandas
- Spark
- SQL
- GitHub
- Shell Scripting
- Spark
- PySpark

Tools

- Google Cloud
- Databricks
- Snowflake
- Tidal
- Service-Now

Professional Experience

Software Engineer at NucleusTeq(10/2022 - Present)

Project: PetSmart BigData Operations

- Designed, developed, and maintained scalable data pipelines for processing large-scale datasets to ensure optimal performance.
- Monitored and troubleshoot production data pipeline failures and prevent them from occurring in the future.

- Optimized queries and improve performance of data systems, ensuring high data availability and reliability.
- Assisted in the development of ETL processes to load data into data lakes using Python and SQL, supporting the team in maintaining data pipelines.
- Coordinated with other business teams for successful rollouts of new features or bug fixes.
- Developed multiple utilities to automate the manual processes of data quality checks and data validation.
- Created Databricks Dashboards for monitoring and reporting purposes.

Education

Masters in Technology (Information Technology) from National Institute of Technology, Raipur

Duration: 2020-2022

Bachelor of Engineering (Computer Science) from Central College of Engineering and Management, Raipur

Duration: 2014-2018

Certificates

- Databricks Certified Data Engineer Associate (Nov 2024-26)
