

Gagan Garg

Senior Software Engineer

✉ garggagan581@gmail.com

☎ 8989022581

📍 Indore, India

Profile

- Senior Software Engineer with 6.3+ years of experience specializing in API and Microservices Development, with a strong background in architecture analysis and distributed application design within Banking and Finance domains.
- Proven experience as a Tech Lead/Senior Software Engineer, successfully leading and managing a team of 15 engineers while delivering high-quality features.
- Extensive expertise in code reviews, client requirement gathering, and management meetings to ensure alignment with project goals.
- Skilled in task estimation, scrum management, and team status reporting, driving project success in Agile environments.
- Versatile experience working in startups, medium, and large-scale enterprises, with the ability to ramp up and lead high-performing teams effectively.

Professional Experience

Shiavnski, Senior Software Engineer

Apr 2022 – present
Indore, India

Tools & Technologies: Java 11/17, Spring Boot, Microservices, RestTemplate, Reactive Programming, GraphQL, MySQL, Couchbase, Git, SonarQube, Jenkins, JIRA, Swagger, Docker, Kubernetes, AWS, Kafka, Avaya Breeze Cloud, Intersystem Cache.

Overview:

Participated as an independent developer and team lead across multiple client projects in diverse domains, including payments, travel, and telecom. Key responsibilities involved developing APIs, enhancing system performance, managing deployments, and mentoring junior developers.

Key Projects:

1) Customer: Convera Payments (Western Union)

- Worked as an independent developer for the **Convera ECM Team**, focusing on developing new features and fixing bugs in phase releases.
- Enforced **enhancements** for existing features, improving functionality and user experience.
- Refactored code to eliminate **boilerplate** and improve system **performance**, resulting in cleaner, more maintainable code.
- Wrote comprehensive **JUnit test cases** with 90% code coverage, ensuring high-quality deliverables.
- Deployed code on **AWS clusters** using **Kubernetes** manifest files, ensuring smooth and efficient application deployment.

- Actively participated in **code reviews** and **client grooming calls**, understanding and aligning with business requirements.
- Reviewed pull requests and provided **mentorship** to junior developers, improving the overall quality of the codebase.
- Generated **documentation** for system components and processes to support team knowledge sharing and future development.

2) Customer: Royal Caribbean Group

- Acted as an independent developer for the Prevacation Wearables and Marketplace teams, responsible for creating various APIs using Reactive Java and Couchbase as the primary database.
- Applied GraphQL for data fetching, replacing traditional JPA calls, resulting in improved system performance.
- Actively participated in code reviews and client grooming sessions to gather requirements and ensure alignment with business goals provided to the Middleware Services team for Marketplace, providing seamless integration between Hybris Backoffice and the Mobile team.
- Planned and developed GraphQL-based APIs, handling both mutations and Hybris consumption APIs to streamline data flow.
- Reviewed code and provided mentorship to junior developers, enhancing team skill levels and code quality.
- Established and managed Kubernetes manifestfiles to facilitate smooth deployment processes.
- Authored comprehensive documentation for system components and processes, aiding in team knowledge sharing and future development.

3) Customer: Avaya US

- Worked on product enhancements and bug fixing for Avaya's product, driving technological advancements after the product's stabilization.
- Extended authentication and authorization for newly generated APIs using JWT, improving security and access management.
- Developed a RESTAPI from scratch for managing customer operations, including opening and closing contacts, optimizing customer management workflows.
- Initiated cache projection calls to streamline data updates within the database, enhancing system performance.
- Handled customer-reported defects, ensuring timely resolutions and maintaining product reliability.
- Reviewed code and mentored junior developers, guiding them to address code review comments and improve code quality.
- Managed a team of 5 engineers, overseeing task assignments, tracking progress, and ensuring alignment with the client roadmap for timely deliveries.

Impetus Infotech, Senior Software Engineer

Customer: StoneX, London

Tools & Technologies: Java, Spring Boot, Wrangler, Confluent Cloud, JSON Schema Validator, Azure DevOps, SonarQube, gRPC, Junit, Mockito, JPA, Docker, Kubernetes

Role/Responsibilities

Jul 2021 – Apr 2022

Indore, India

- Developed a **validation service** in Spring Boot from scratch, catering to business requirements and ensuring high performance and scalability.
- Generated various **Proof of Concepts (POCs)**, contracts, and client demonstrations to showcase potential solutions and product feasibility.
- Collaborated on **.NET codebase** for seamless integration of Java services into existing systems, promoting inter-language compatibility.
- Integrated **WorldCheck API** for **KYC screening** of customers, ensuring compliance with regulatory requirements.
- Applied **gRPC** for efficient **inter-service communication**, optimizing data exchange between microservices.
- Utilized **Confluent Cloud** for managing and storing **JSON schemas**, enhancing data validation processes.
- Set up **Azure pipelines** for **SonarQube analysis** and **Protobuf stubs generation**, automating CI/CD workflows and improving code quality.
- Adopted **Agile methodology**, participating in daily **standups** and **progress meetings** with clients to ensure alignment with project goals.
- Wrote comprehensive **JUnit test cases** with high code coverage, ensuring the robustness and reliability of the developed services.

Tata Consultancy Services, *System Engineer*

Aug 2019 – Jul 2021

Customer: Huntington National Bank, OHIO(U.S)

Indore, India

Tools & Technologies: IBM Integration Bus v19, SOAP UI, RFHUtil, Swagger Editor, IBM Integration Designer, GIT, Jenkins, Yaml, ESQL

Role/Responsibilities:

- Worked on a U.S.-based banking project, delivering a range of banking services through **web services migration** and **development**.
- Part of a team responsible for **migrating WESB code** to **IBM Integration Bus (IIB)**, addressing the end of rich support for WESB and modernizing legacy systems.
- Developed **CICS, SOAP, and REST web services**, ensuring smooth integration and robust functionality for banking operations.
- Initiated **Swagger YAML documents** for **REST services**, enhancing API documentation and ease of client integration.
- Conducted **unit testing** and deployed web services across multiple environments, ensuring smooth operation in both development and production stages.
- Initiated **testing artifacts** and supported the QA process with clearly planned documents and artifacts for reference by the client.
- Involved in **requirement analysis** and coding phases, collaborating directly with onshore and offshore leads and managers to ensure alignment with business needs.
- Engaged in **issue analysis** and troubleshooting, resolving problems within SLA timeframes while maintaining standard solution practices.
- Worked on **code enhancements** and minor feature improvements identified during **production** or **system testing** phases.

Tata Consultancy Services, *Assistant System Engineer*

Jul 2018 – Aug 2019

Customer: Nationwide Insurance, OHIO(US)

Chennai, India

Tools & Technologies: IBM Integration Bus v19, SOAP UI, RFHUtil, Websphere Message Broker, HPQ, GIT, WMB

Role/Responsibilities:

- Contributed to a U.S.-based insurance project, supporting various lines of business including **automobile**, **property**, **power sports**, and **dwelling fire** insurance.
- Worked on **enhancement** and **amendment tickets** requested by the client, ensuring alignment with evolving business requirements.
- Performed **risk analysis** and **premium calculation** based on specific risk factors, contributing to accurate insurance pricing models.
- Involved in the **requirement analysis** and **coding phase** of the application, working directly with onshore and offshore leads and managers to ensure seamless communication and timely delivery.
- Conducted **issue analysis** and enforced fixes within **SLA** deadlines, adhering to best practices and maintaining service standards.
- Made **minor code enhancements** and resolved issues encountered during **production** or **system testing**, ensuring system stability and feature improvements.
- Performed **unit testing** for each functionality post-development, verifying code quality and adherence to specifications.

Education

IES IPS ACADEMY, B.E (CSE)	2018 Indore, India
ILVA HS SCHOOL, High School	2014 Indore, India

Skills

- | | | | |
|-------------|------------------------|-----------------|-----------------|
| • Java 17 | • Reactive Programming | • AWS | • Microservices |
| • Kafka | • Docker | • Kubernetes | • gRPC |
| • GraphQL | • Twilio | • Hibernate | • Jenkins |
| • React JS | • GCP | • Junit/Mockito | • Redis |
| • SQL/NoSQL | | | |

Projects

Ecommerce - Proof Of Concepts (POCs)

Tech Stack: Spring Boot, JPA, Mockito, JUnit5, Twilio, Javax Mail, Hibernate, MySQL, Microservices, JWT, Spring Security, Spring Cloud Gateway, Kubernetes, Docker

Project Features:

- **User Email Verification System:** Applied email verification for user account activation using **Javax Mail**.
- **Forgot Password Feature:** Integrated **Twilio API** for secure password recovery via SMS, enhancing user experience.
- **Microservices Architecture:** Initiated a **microservices-based** system with **API Gateway-level authentication and authorization** using **JWT tokens** through **Auth0**.

- **Eureka Discovery Server:** Enabled **service discovery** with Eureka, allowing dynamic service registration and load balancing.
- **Inter-service Communication:** Utilized **RestTemplate** for efficient communication between microservices.
- **Testing:** Wrote comprehensive **Mockito** and **JUnit5** test cases, achieving over 90% code coverage to ensure high-quality deliverables.
- **Security:** Applied **Spring Security** for user authentication and authorization, ensuring secure access to the system.
