

NAVEEN KUMAR RAVVARAPU

Mob: 7989074143

Email: nravvarapu@gmail.com

Career Objective

To give a significant contribution to an organization through the best utilization of my skills and abilities.

Experience Details:

- 9+ years of experience in Information Technology in Development of Applications using Oracle SQL 10g/11g Database and Snowflake Data warehouse.
- Having around 5+ years of Professional Experience in working with Snowflake cloud data warehouse and DBT, AWS, Python, Airflow, ETL(Talend).
- Hands-on experience in bulk loading and unloading data into Snowflake tables using COPY command / Snowpipes, Python.
- Good experience on different Snowflake (Time travel, Fail safe, Data Streams, Tasks, Cloning, Data masking, Data sharing, etc.)
- Good exposure on Snowflake Insert, Update and Merge command.
- Good experience on Snowflake Stages (User Stage, Table Stage, Named Stage, External Stage).
- Good exposure on different types of snowflake tables and views.
- Handling large and complex data sets with CSV, JSON file formats.
- Created complex stored procedures in Snowflake using SQL/JavaScript languages.
- Good exposure into DBT Cloud by creating models, Profiles, Testing, Jobs.
- Written many dags to transform data in both Airflow and DBT models.
- Created different Macros and Models, Hooks in DBT.
- Created different Python scripts for dynamic data transformation using Python libraries, Data Frames.
- Good Knowledge on UNIX commands and basic Unix Shell scripting.
- Experience in creating and maintaining different types of database objects like Tables, Views, Indexes, Partitions and Sequence.
- Extensive experience in Constraints, Functions, Procedures, Packages, Exceptions Handling, Cursors

- Experience in Airflow DAGS and ETL mappings.
- Experience in DBT models for incremental data handling(Macros, Hooks, Seeds, etc..).

Academic profile:

M. Tech (MPHS) From Jawaharlal Nehru Technological University, Kakinada.

Professional Summary: -

- Working as Sr Data Engineer in **NucleasTeq** from Nov- 2023 to Present.
- Worked as Senior system engineer in **Wipro** Hyderabad from Oct-2021 to – May 2023.
- Worked as Consultant in **Virtusa** Hyderabad from Aug-2020 to Sep – 2021.
- Worked as Software Developer in **Frigate Games Private Limited**, (Client: Virtusa) Hyderabad from Aug 2017 to May 2020.
- Worked as Software Engineer in **Lince Soft Solutions Pvt Ltd** , Hyderabad from JUNE 2014 to JULY 2017.

Skills

Oracle Tech	:	SQL, PL/SQL, SQL Developer
Visualization	:	PowerBI, Tableau
Database	:	SQL Server, Oracle, REDSHIFT, Postgres, Nosql
Cloud Database	:	Snowflake Data Warehousing
Tools	:	Airflow, Control -M
Domain	:	Healthcare, Utility, Finance, Insurance
Languages	:	Unix Scripting, Python, JavaScript
ETL Tools	:	Talend, DBT, Matelion

PROJECTS INVOLVED

PROJECT #1

Title : Sr DataEngineer
Client : Salesforce
Duration : Dec- 2023 to Present
Environment : Snowflake, Aws, Python, SQL, DBT, Airflow

Roles & Responsibilities:

- Collaborated with cross-functional teams to define data engineering needs, ensuring

- effective integration of data solutions across platforms.
- **Optimized and tuned SQL queries** for performance improvements, ensuring faster data processing and reduced query time.
- **Developed and implemented automated data pipelines** Using Airflow to ensure seamless ETL workflows and timely data delivery.
- **Utilized Snowflake's data sharing and external tables** to integrate data from various sources efficiently.
- **Migrated the Airflow dags** from one PHX to DNA within the Salesforce environment.
- **Implemented data quality checks and automated alerts** within Airflow and DBT to ensure data accuracy and consistency throughout the pipeline.
- **Designed and maintained scalable, high-performance data models** for data warehousing and analytics to meet business requirements and support data-driven decision-making.
- **Worked on Snowflake's multi-cluster architecture**, optimizing the compute and storage resources to reduce costs and enhance processing efficiency.
- **Led the migration of on-premise legacy databases** to the cloud-based Snowflake platform, improving scalability and data availability.
- **Implemented Airflow dags** by creating custom Airflow operators and using python libraries.
- **Used DBT for building data transformation models**, version controlling and testing the data transformations to ensure robustness in production environments.
- **Automated daily/weekly/monthly reporting and data integration tasks**, reducing manual efforts and improving productivity through seamless scheduling and orchestration in Airflow.
- **Participated in performance tuning and cost optimization efforts** for both Snowflake and AWS resources, resulting in a significant reduction in cloud infrastructure costs.
- **Engaged in data profiling and exploratory data analysis** to ensure high-quality data and meet business needs for reporting and analytics.
- **Monitored the entire ETL pipeline** for performance and errors, proactively addressing failures and implementing fixes for any job failures to ensure uninterrupted data flow.
- **Created detailed technical documentation** for the data pipelines, stored procedures, and business logic, enabling future enhancements and maintaining a knowledge repository for the team.
- **Worked closely with Data Analysts and Data Scientists** to understand their data requirements, ensuring timely data availability for analysis and machine learning models.
- **Ensured compliance with data governance and security policies** by incorporating encryption and access control mechanisms within data pipelines and storage solutions.

PROJECT #2

Title : Senior System Engineer
Client : Cisco
Duration : Sep-2021 to Mar-2023
Environment : Snowflake, Aws, Lambda, Python, SQL, DBT, Airflow

Roles & Responsibilities:

- Working as Data Engineer
- Developed Advance Snowflake SQL queries to meet business requirements.
- Collected User Requirements by participating in Sprint Grooming meetings.
- Created Modeles, Jobs, Dependency models, Macros, Hook, Seed using DBT Cloud for

transformations. .

- Created Snowflake stored procedures, Python scripts for data migration from different sources to Snowflake.
- Migrated the data from Oracle to Snowflake using Python, DBT, AWS, Airflow tools.
- Wrote complex queries in Oracle database to develop migration scripts.
- Performed Snowflake admin activities like providing grants to different users.
- Performed data validations in different environments.
- Monitoring ELT(DBT) jobs and fixing failure jobs while extracting data from source to Snowflake.
- Gathering requirements from product-application teams, **JIRA, Confluence**.
- Interacting with customers through Emails and Slack calls.
- Creating Database Objects like **tables, Views, sequences, Synonyms, Stored Procedures, functions, Packages, Cursors, Ref Cursor, Collections** as per the Business requirements.
- Writing **complex SQLs** to **extract data** directly from DB Server to produce XMLs, Jason format data.
- Writing SQL queries and creating flat tables to move data to different DB's and Schemas by using **Snowflake**.
- By using Phyton and Ninja template generating R-Pipeline and C-Pipeline code.
- Moving data from Flat table to Bim tables by using SnowSQL and DDL scripts .
- Created and modified several **UNIX** shell Scripts according to the changing needs of the project and client requirements.
- Writing **Unix Shell Scripts** to process the files on daily basis like renaming the file, extracting date from the file, unzipping the file and remove the junk characters from the file before loading them into the base tables.
- Creating single time scripts to create new data into tables, views, queries for new enhancement in the application.
- Created indexes on the tables for faster retrieval of the data to enhance database performance.
- Handling customer migration issues from version to version, improving the code quality by enhancing the existing code and providing defect free code.
- Handling errors using Exception Handling extensively for the ease of debugging and displaying the error messages in the application.
- Collaborating with product management to design, build and test systems.
- Developed code fixes and enhancements for inclusion in future code releases and patches.
- Analyze the Existing code and do the impact analysis.
- Tuning SQL queries to improve response time, Handled Performance Issues, analyze **TKPROF, V\$SQL, DBMS_STATS, HINTS**.

- Involved in the continuous enhancements and fixing of production problems.
- Working on Angular framework (JASON) and .Net (XML) data.
- Performing pre- and post-data Validations, Functionality to make sure all the required changes are working as per user story given by Workday.

PROJECT#3:

Client : **AdaptHealth**
Environment : **Snowflake, Oracle, SQL Server, Tableau, Aws**
Team Size : **10**
Duration : **Aug 2020 to Sep 2021**
Role : **Senior Consultant**

Roles & Responsibilities:

- Gathering requirements from product-application teams, **JIRA, Confluence**.
- Interacting with customers through Emails and Slack calls.
- Creating Database Objects like **tables, Views, sequences, Synonyms, Stored Procedures, functions, Packages, Cursors, Ref Cursor, Collections** as per the Business requirements.
- Writing **complex SQLs** to **extract data** directly from DB Server to produce XMLs, Jason format data.
- Writing SQL queries and creating flat tables to move data to different DB's and Schemas by using **Snowflake**.
- By using Phyton and Ninja template generating R-Pipeline and C-Pipeline code.
- Moving data from Flat table to Bim tables by using SnowSQL and DDL scripts .
- Created and modified several **UNIX** shell Scripts according to the changing needs of the project and client requirements.
- Writing **Unix Shell Scripts** to process the files on daily basis like renaming the file, extracting date from the file, unzipping the file and remove the junk characters from the file before loading them into the base tables.
- Creating single time scripts to create new data into tables, views, queries for new enhancement in the application.
- Created indexes on the tables for faster retrieval of the data to enhance database performance.
- Handling customer migration issues from version to version, improving the code quality by enhancing the existing code and providing defect free code.
- Using Bulk Collections for better performance and easy retrieval of data, by reducing context switching between SQL and PL/SQL engines. Created PL/SQL scripts to extract the data from the operational database into simple flat text files using **UTL_FILE**.
- Creating records, tables, collections (nested tables and arrays) for improving Query performance by reducing context switching.

- Using Pragma Autonomous Transaction to avoid mutating problem in database trigger.
- Handling errors using Exception Handling extensively for the ease of debugging and displaying the error messages in the application.
- Collaborating with product management to design, build and test systems.
- Developed code fixes and enhancements for inclusion in future code releases and patches.
- Analyze the Existing code and do the impact analysis.
- Tuning SQL queries to improve response time, Handled Performance Issues, analyze **TKPROF, V\$SQL, DBMS_STATS, HINTS**.
- Involved in the continuous enhancements and fixing of production problems.
- Working on Angular framework (JSON) and .Net (XML) data.
- Performing pre- and post-data Validations, Functionality to make sure all the required changes are working as per user story given by Workday.

PROJECT#4:

Client	:	CITI BANK
Duration	:	Aug-2015 to July-2020.
Environment	:	SQL, Oracle11g, Linux, Snowflake, AWS
Role	:	Consultant

Roles & Responsibilities:

- Creating database procedure, function, package, triggers etc. and modification of database structure.
- Develop Request type and workflow.
- Ensuring technical solutions are designed for performance, reliability, scalability, maintainability, supportability, business continuity, and business agility while leveraging industry's best practices.
- Implementing Business Logic using PL/SQL Stored Program Units.
- End to End Application Responsibility.
- Responsible for developing pl/sql routines for Database to maintain the Quality.
- Participating in smooth implementation of the project and extending post-implementation, application maintenance and technical support.
- Responsible for generating payload from Oracle database and send it through middleware to third party system called FieldAware.
- Working on the outbound packages and receiving response from FieldAware.

PROJECT#5:

Client : **UIIC (United India Insurance Company), IN**
Duration : **Aug-2014 to July-2015**
Environment : **SQL, Oracle11g, Linux**
Role : **Developer**

Roles & Responsibilities:

- Given 24/7 support and worked in Client location.
- Worked in SLA project.
- Wrote conversion scripts using SQL, PL/SQL, stored procedures, functions and packages to migrate data from Oracle-8i database to Oracle 11G database.
- Tracked tickets by using HP ALM tool and resolved issues by accessing database.
- Modified existing Oracle objects.
- Created various DML and DDL statements using Oracle PL/SQL and SQL.
- Monitored scheduled jobs and in case of failures took necessary actions to get resolve with in SLA's.
- Involved in loading data from flat files to Oracle database using SQL Loader.
- Worked in Data Migration project from Oracle 8i to Oracle 11G
- Generated reports by moving data from Stage to Production.
- Handled different servers Archive, Rejection, Production.
