

Nitin Kumar Sahu

Professional Summary

I am having an end to end experience in Data Engineering. A versatile and enthusiastic individual with knowledge in Data Engineering & Transformation, Data Quality & Assurance, PySpark Developing and Azure Data Engineering. Skilled at AWS Cloud Services, Azure Cloud Services, Python, SQL, PySpark and SparkSQL. Possess a strong foundation in designing, developing, and maintaining data pipelines. Expertise in various stages of the data lifecycle, data ingestion, storage, transformation and analysis; implemented data validation and quality checks. Gathering and accumulating data from diverse sources, and subsequently cleaning, organizing, processing, and analyzing the same to extract valuable insights and information. An effective communicator and team player with excellent interpersonal, presentation and analytical skills .

Technical Skills

Programming

- Python
- SQL

Tools

- ETL
- Pyspark
- Spark SQL
- Azure Databricks
- Azure Datafactory
- HDFS
- Hive

Professional Experience

Data Engineer at Nucleus Teq(08/2023 - Present)

Project: Working on job monitoring and production pipeline support in project.

- Monitored and managed production jobs in Databricks, ensuring seamless execution of scheduled workflow and identifying patterns in recurring issues.
- Actively participated in development activities to enhance pipeline reliability, reducing failure cases and improving overall system robustness.
- Diagnosed and resolved high-priority job failures, minimizing operational downtime and implementing proactive measures to prevent future incidents.
- Designed and implemented optimized workflows in Databricks using PySpark and SparkSQL, improving performance and resource efficiency.
- Collaborated with the development team to integrate enhancements into existing pipelines and deploy improved processes to production.
- Leveraged Google Cloud Platform (GCP) for scalable data storage.

Data Engineer at Decision Point Analytics(11/2022 - 06/2023)

Project: Working on the project for value share forecasting

- Involved in the design and development of Data Pipelines using ADF (Azure Data Factory), contributing to the pipeline building process.
- Experience with Azure Databricks, Pyspark, and Spark SQL for seamless data transformation as per business requirements.
- Implemented Data Cleaning and Data Quality checks processes in the pipeline to ensure data integrity and reliability.
- Proactively identified and optimized transformation processes to improve overall efficiency.
- Demonstrated strong analytical and problem-solving skills in streamlining the data transformation workflow.
- Committed to delivering data solutions that empower organizations with actionable insights and data-driven decisions.

Data Engineer at Futureense Technologies Pvt. Ltd.(10/2021 - 11/2022)

Project: Develop an ETL Data Pipeline to Enhance Logistic Operations

- Extracted and processed a substantial volume of data from the source on a daily basis, leveraging AWS cloud services or databases tailored to project requirements.
- Collaborated closely with cross-functional teams to understand specific data requirements and implement data solutions that aligned with business needs.
- Utilized Pyspark in Databricks to apply complex data transformations, focusing on optimizing performance and ensuring data quality and accuracy.
- Implemented data monitoring and error handling mechanisms to identify and resolve issues in the ETL process, ensuring data consistency and reliability.
- Conducted data profiling and performance tuning to improve data processing speed and optimize the overall data infrastructure.
- Documented the ETL processes, data mappings, and data models for enhanced data governance, traceability, and knowledge transfer within the team.
- Actively participated in code reviews and implemented best practices to maintain high-quality, maintainable, and reusable code for the ETL pipelines.

Education

B.E. from Rajiv Gandhi Proudhyogiki Vishwavidyalaya

Duration: 2009 - 2013
