

Priyanshu Singh

Objective

To establish oneself as a dedicated and innovative Data Engineer, specializing in transforming raw data into actionable insights through comprehensive data solutions by designing and implementing robust data pipelines that streamline processes and enhance decision-making with extensive experience in DBT, Snowflake, SQL and Python.

Professional Summary:

- Having 2.5 years of experience working in the field of ETL/ELT Development.
- Worked on projects that offered hands-on experience on diverse set of technologies.
- Worked on ETL tools like Informatica Powercenter, IICS, Data build tool and utilized Snowflake as data warehouse.
- Experienced in optimizing data ingestion and transformation using HVR replication tool and DBT.
- Gathered and translated migration and enhancement requirements into technical solutions as Snowflake EDOs, Views, Dimensions and facts.
- Worked closely with client's track leads to help analyze and enhance their current migration deliverables.
- Have taken lead on a few ETL developments, which were successfully migrated to production.
- Follow Agile Methodology for project management, and well-versed with the Jira tool.
- Hands-on experience in manual ETL testing: Data Validation, Transformation Validation, Delete logic validation.
- Received appreciation note from customer for saving efforts by Automating the file ingestion process.
- Received on the spot award for dedicated hard work and learning required skills without hampering current project work.

Technical Skills:

Technology: Data Engineering, Data Pipelines, Snowflake Streams, Data Integration

Programming: Python, SQL, Pyspark, GitHub, Linux, SnowSQL, SnowSight

Tools: Excel, Snowflake, SQL Developer, DBT, Airflow, AWS S3, AWS EMR

Microsoft Suites: Outlook, Windows, Linux, UNIX, Word, Excel, and PowerPoint.

Professional Experience:

Data Engineer | LTIMindtree | SNDR_FP_APP_MIGRATION | Dec 2022 to Dec 2024

Key Responsibilities and Learnings:

- Led the migration and enhancement project involving the ingestion of tables from Oracle to Snowflake using HVR replication tool.
- Created and managed Entity Data Objects (EDOs) and views based on business requirements utilizing the dbt tool.
- Scheduled and monitored ETL jobs using CA Workload Automation (CAWA).
- Developed dimension and fact tables from EDOs to support business intelligence needs.
- Managed all models and code repositories using Git.
- Processed tabular data, including JSON, by flattening and transforming it into structured data for target tables.
- Ensured target tables were materialized incrementally in dbt, using date control logic to insert or update incremental data.
- Implemented pre-hook and post-hook logics in dbt to manage record deletions from target tables.
- Processed source files using Python script to parse, validate headers, and load data into Snowflake.
- Ensured data integrity and transformation logic accuracy in final tables by manually testing the ETL process.

Certification and Training:

- Snowflake – SnowPro Core Certification

Education:

- Bachelor of Engineering (Electronics and Communication) | 2018-2022 | Dayananda Sagar Academy of Technology and Management, Bangalore, Karnataka
-
