Summary

- Having nearly 4.9 years of total experience as Salesforce Development in Business Intelligence leveraging Tableau CRM/CRMA (Einstein analytics).
- Good understand source data and advice on ELT transformations to achieve desired data structures for Einstein Analytics.
- Have hands-on experience on SAQL.
- Used to create the stories by the intelligent layer (Einstein discovery) and creating the best model by running the multiple iterations for the predictions.
- Experienced in working closely with multiple teams to meet business requirements.
- Experience of Data Visualization, Reporting and Dash-boarding for enterprise wide applications using Tableau CRM(Einstein Analytics)/CRM Analytics.
- Knowledge of Create Profiles, Permission Sets and Field-Level Security to Safeguard Data in Salesforce.
- Implemented Salesforce Lightning components to enhance user interface and user experience.
- Working towards User Acceptance Test (UAT).
- Working with and serve as the liaison between business units, technology teams.
- Experience in creating Derived Fields using calculated functions and Parameters in Tableau and worked on the development of Dashboards for the Key Performance Indicators (KPI) for the top management.
- Good analytical, communication, leadership qualities and interpersonal skills.
- Experience in financial industry/ Medical domain with a good exposure in analyzing and resolving the bugs in the given timeline

Education Details

- Bachelors of Engineering Yashwantrao Chavan College of engineering, Nagpur (RTMNU University)

Technical Skills

- **Operating system** : Windows
- **Business Intelligence Tools** : Tableau CRM(Einstein Analytics).
- **Ticket Tool** : Jira, Azure
- **Package** : MS-Office

Organizational Achievements

- Birlasoft Ltd, Pune – **Technical Specialist** (Jun 2024 to Present)
- Invesco India Pvt Ltd, Hyderabad – **Business Analyst** (April 2021 to Dec 2023)
- Hcl Technologies, Bangalore - **Analyst** (Jan 2020 to April 2021)

Professional Experience

Project#1

Project : Paccar
Environment : Tableau CRM (Einstein Analytics) Developer.
Role : Technical Specialist

Roles and Responsibilities:

- Gathering Business requirements, understanding the functional specifications and translate them to possible solutions using Tableau CRM (Einstein Analytics).
- Coordinated with Onsite coordinator and offshore team for understanding of requirements, built more than 15+consumable tableau dashboards and worked with the senior head of supply chain business intelligence team. Instituted the capability which can identify the amount of back stock that needs to be kept in the 20+ Target store.
- Collecting data from the salesforce objects to the data layer, data preparation at dataflow or recipes, exploring the data using LENS, performed the feature engineering created stories and analyzed the predictions using different algorithms. Performed app building and dashboards at the designer layer.
- Developed the dashboard for 25+target stories that gives the hour level trend of unit sales for the selected stores along with out of stocks.
- Develop, organize, manage and maintain graph, table, slide and document templates that will allow for efficient creation of reports.

Project#2

Project Name : Heska Corporation - Sales Performance Management.
Role : Tableau CRM (Einstein Analytics) Developer.
Environment : Salesforce Environment.

Project Description : The Heska Corporation is involved in biotechnical research for the development of vaccines and related diagnostic products for companion animals. The company manufactures health care products for dogs, cats, and horses and markets them to veterinarians. Products include treatments for fleas, heartworms, allergies, dermatitis, and viral infections. Heska also manufactures and distributes diagnostic and monitoring devices to veterinarians.

Roles and Responsibilities:

- Gathering Business requirements and translate them to possible solutions using Tableau CRM (Einstein Analytics).
- Coordinated with Onsite coordinator and offshore team for understanding of requirements.

- Collecting data from the salesforce objects to the data layer, data preparation at recipes, exploring the data using LENS. Performed app building and dashboards at the designer layer.
- Create the stories by the intelligent layer (Einstein discovery) and creating the best model by running the multiple iterations for the predictions.
- Used the multiple algorithms for the predictions such as regression and XG-Boosting
- Deployed the models, monitoring them and redeploying the model for any prediction variations.

Project#3

Project Name : Supply chain analytics (Automobile Industry)

Client : MBFS, UK

Role : Tableau CRM (Einstein Analytics) Developer.

Environment : Salesforce Environment.

Description: MBFS financial services is a leading, captive financial services provider and the global financial services, world's largest automobile distributor and a leading in sales, marketing and logistics company. Creates sales and profitability opportunities for vendors and resellers through unique marketing programs, outsourced logistics services and support, financial services and product aggregation and distribution.

Roles and Responsibilities:

- Gathering Business requirements, understanding the functional specifications and translate them to possible solutions using Tableau CRM (Einstein Analytics).
- Coordinated with Onsite coordinator and offshore team for understanding of requirements, built more than 5+consumable tableau dashboards and worked with the senior head of supply chain business intelligence team.
- Instituted the capability which can identify the amount of back stock that needs to be kept in the 20+ Target store.
- Developed the dashboard for 5+target stories that gives the hour level trend of unit sales for the selected stores along with out of stocks.
- Develop, organize, manage and maintain graph, table, slide and document templates that will allow for efficient creation of reports.
- Collecting data from the salesforce objects to the data layer, data preparation at dataflow or recipes, exploring the data using LENS, performed the feature engineering created stories and analyzed the predictions using different algorithms. Performed app building and dashboards at the designer layer.
- Create the stories by the intelligent layer (Einstein discovery) and creating the best model by running the multiple iterations for the predictions.
- Deployed the models, monitoring them and redeploying the model for any prediction variations.

Achievements

- Part of organizing committee of ICON (National level technical event in YCCE) for three years (2018, 2017)
