Professional Summary

Highly skilled and motivated Data Engineer with extensive experience in Python, PySpark, SQL, Docker, and data pipeline development. Proven expertise in data cleaning, transformation, visualization, and reporting. Adept at managing large-scale data projects and delivering actionable insights to stakeholders. Currently employed at NucleusTeq, with a track record of innovative solutions and enhanced operational efficiencies. Skilled in collaborating across teams to deliver high-quality software solutions.

Technical Skills

- **Programming Languages:** Python, SQL, Java, Bash
 - **Data Engineering:** PySpark, Spark, Snowflake Streams, SnowSQL, Databricks
 - **Tools & Technologies:** Docker, Tidal, ServiceNow, Rivery, MS Access
 - **Database Management:** PostgreSQL, MySQL, Snowflake
 - **Visualization & Reporting:** Excel Dashboards, PowerPoint Presentations, Advanced Excel
 - **Cloud Platforms:** Google Cloud, Snowflake, Databricks
 - **Version Control & Collaboration:** GitHub
-

Professional Experience

Data Engineer

NucleusTeq

September 2024 - Present

- Designed and implemented scalable data pipelines using PySpark to handle structured and unstructured data.
- Developed advanced data transformation processes for efficient analytics and reporting.
- Automated attendance reconciliation for a 400+ employee base with PresencePro, enhancing accuracy and payroll processing.
- Migrated data processing pipelines to Parquet storage format for improved performance and reduced costs.

- Created detailed data visualization reports, providing actionable insights for top 10 ordered products, age group distribution, and review statistics.
- Optimized ETL workflows using Docker and Spark for seamless execution in containerized environments.

Python Developer

Freelance Projects

January 2023 - August 2024

- Developed a Django-based reimbursement portal integrated with MySQL database.
- Implemented Dockerized environments for Python applications, ensuring platform-independent deployments.
- Automated the extraction, transformation, and loading (ETL) processes for diverse file formats such as JSON, CSV, and Excel.
- Created robust logging systems and error-handling mechanisms for data processing tasks.

Backend Developer Intern

ABC Software Solutions

July 2022 - December 2022

- Contributed to the development of backend systems using Django and Python.
- Improved API performance by optimizing SQL queries and database structure.
- Collaborated with frontend teams to ensure seamless integration of backend services.

Key Projects

PresencePro - Attendance Management System

- Automated weekly attendance reports for over 400 employees across multiple locations and time zones.
- Developed notification systems to address absence discrepancies and streamline approval workflows.
- Standardized attendance statuses and integrated leave data with payroll systems.

Tailor Management System

- Led a team in building a microservices-based system to manage orders, inventory, and customer data.
- Designed and implemented efficient database schemas to handle high-volume transactional data.

- Conducted R&D to enhance system scalability and reliability.

Data Visualization & Insights

- Generated actionable visual reports for business analysts using line charts and dashboards.
 - Provided insights into sales trends, city-wise order distribution, and product performance metrics.
 - Ensured all visualizations were enriched with contextual descriptions for better interpretation.
-

Education

Bachelor of Technology in Computer Science

XYZ University

Graduated: 2022

- Coursework: Data Structures, Algorithms, Database Management Systems, Distributed Systems
 - Final Year Project: "Efficient Big Data Processing Using Apache Spark"
-

Certifications

- Google Cloud Data Engineering Certification
 - Snowflake Advanced Developer Certification
 - Certified Kubernetes Administrator (CKA)
-

Achievements

- Recognized as "Employee of the Quarter" for innovative data pipeline solutions at NucleusTech.
 - Published an article on "Optimizing PySpark Workflows" in a leading tech blog.
 - Secured 1st position in a national-level hackathon for developing a real-time data analytics dashboard.
-

Interests

- Exploring advancements in big data technologies and distributed computing.
- Mentoring junior developers and conducting knowledge-sharing sessions.

- Participating in community coding events and hackathons.
-

References

Available upon request.

Additional Achievements

- Contributed to an open-source PySpark optimization library adopted by over 500 developers.
 - Designed a training curriculum for onboarding junior data engineers, significantly reducing ramp-up time.
 - Presented a talk on "Efficient ETL with Spark and Parquet" at a national data engineering conference.
 - Implemented cost-saving measures in cloud data storage, reducing expenses by 30% annually.
-

Volunteer Work

- Organized hackathons and coding events as part of a developer community initiative.
 - Mentored underprivileged students in data science concepts, helping them secure internships.
-

Technical Publications

- "Optimizing ETL Workflows with PySpark" - A detailed guide published in a leading data engineering journal.
 - "The Future of Data Warehousing: A Snowflake Perspective" - Blog post with 10,000+ views.
-

Workshops & Seminars Attended

- Advanced PySpark Techniques (2024)
- Data Pipeline Scalability and Optimization (2023)
- Cloud Data Engineering Bootcamp (2022)
- Docker and Kubernetes for Data Professionals (2021)

Languages

- English (Fluent)
- Hindi (Native)
- Spanish (Basic)

Hobbies

- Exploring new programming paradigms and technologies.
- Reading science fiction and technical blogs.
- Traveling and capturing landscapes through photography.

Professional Memberships

- Member, Association of Data Engineers (ADE)
- Contributor, Open Data Science Community (ODSC)

Future Goals

- Achieve certifications in AWS and Azure cloud data engineering.
- Contribute to more open-source projects in the data engineering domain.
- Transition into a leadership role managing larger cross-functional data teams.

Recommendations

Available upon request.

Extra Sections to Extend Resume for Testing Purposes

Advanced Projects

Real-Time Analytics Platform

- Designed a real-time analytics platform for monitoring social media trends using Spark Streaming.
- Integrated Kafka for real-time data ingestion and Elasticsearch for indexing.

- Provided a dashboard for live metrics visualization.

IoT Data Pipeline

- Built a pipeline to handle high-velocity IoT sensor data from smart devices.
- Ensured data integrity and optimized storage for scalable processing.

Machine Learning Pipeline

- Developed an end-to-end machine learning pipeline for predictive analytics on sales data.
- Automated feature engineering and model deployment.

Extended Education

- Diploma in Data Science - ABC Institute, 2021
- Short Course: Big Data Analysis with Spark - DEF Academy, 2020

Expanded Interests

- Volunteering for open-source community projects.
 - Studying emerging trends in AI and machine learning.
 - Conducting data-driven market research.
-
