

VENKATESH PASAM
Full Stack Java Developer
Email: venkatpasam28@gmail.com
Phone: (972)-275-9242

PROFESSIONAL SUMMARY

- Over 10+ years of experience in analysis and java Full Stack development, testing, implementing Web based, Client/Server Applications along with Enterprise and Distributed applications across the entire Software Development Life Cycle using Java and J2EE Technologies.
- Experience with Agile and Test-Driven Development (TDD) development methodologies.
- Experienced in various domains such as Finance, Banking, Government sector software projects, and healthcare sector software solutions.
- Experience with Java SE 17, 11, 8, and 7, including their unique features such as try-with-resources lambda expressions, the Stream API, new Date/Time API (Java 8), local-variable type inference (Java 11), and pattern matching for instance of (Java 17).
- Developed dynamic web applications using JSP and Servlets and deep understanding of Java EE platform and Multithreading, Concurrency, File Handling I/O, Generics, Data Structures and Collections, Garbage Collection.
- I have experienced working with spring modules like Spring Core, Spring AOP, Spring Boot, Spring Data, Spring ORM, Spring MVC, Spring Boot, spring security and Micro services.
- Developed and deployed microservices architectures, enhancing application scalability and maintainability.
- Worked on SOAP, REST, GraphQL, and JWT for flexible and secure data handling.
- Strong command over API development, particularly in designing RESTful APIs and implementing OAuth for secure authentication and authorization.
- Worked on new security features and enhancements in Spring Security and implementing continuous security improvements to safeguard applications against evolving threats.
- Used Apache for integration and Data Processing with Spring and for Multi-Threaded Message Consumption and worked on Zookeeper to maintain services.
- Implemented OAuth2 and JWT for protecting sensitive information and experience in securing RESTful APIs using JWT-based authentication, enabling stateless and scalable API architectures.
- Developed custom OAuth providers using Java frameworks like Spring Security OAuth to enable secure authentication and authorization.
- Skilled in creating RESTful services, implementing OAuth2 for security, and efficiently using JSON for web services communication.
- Expertise in developing front - end systems using JavaScript, Bootstrap, HTML, CSS, MVC frameworks such as Angular 13/11/8, React.
- Developed microservices using Vert.x to enhance scalability and fault tolerance of critical banking systems.
- Implemented Vert.x clustering for high availability and fault tolerance, ensuring uninterrupted service delivery in production environments.
- Enhanced Legacy Applications by building new components in Angular and Typescript with REST wrapper around the existing Backend Java services.
- Experience in major web application servers like Apache Tomcat, JBoss, Express Node.js, and Apache Http Server.
- Build REST web service by building Node.js Server in the back end to handle requests sent from the front-end jQuery Ajax calls.
- Wired on in React JS and Component, Forms, Events, keys, Router, Plus Redux, Animations and Flux concept.
- Used Redux selectors to optimize data retrieval and enhance application performance and Integrated Redux Dev Tools for real-time debugging and state inspection during development.
- Designed and implemented Redux middleware to customize behavior and enhance functionality.
- Development of a scalable microservices architecture using Node.js, facilitating high-throughput transaction processing.
- Experience on Node.js express server, and using technologies like Ajax, JavaScript/jQuery, JSON to make connections between servers and databases like MongoDB and MySQL.
- Analyzed the Node.JS server structure in legacy project, then copied the REST service by using Java JAX-WS API and did the corresponding configurations.
- Used backend frameworks Nodejs, ORM, GraphQL, MySQL Database and AWS Stack.
- Experienced in Microservices JS and working with React Flux architecture.
- Good experience in React.js for creating interactive UI using One-way Data Flow and Virtual DOM, JSX, React Native concepts.

- Experienced in message queue technologies such as Kafka and RabbitMQ for building scalable and real-time messaging systems.
- Integrated Kafka with complementary tools and technologies such as Apache Zookeeper, Apache Flink, Apache Spark, Elasticsearch to build comprehensive data processing and analytics solutions.
- Experience in deploying and managing Kafka clusters in cloud environments (e.g., AWS, Azure, GCP) using cloud-native services or Kubernetes.
- Designed and implemented a Kubernetes cluster architecture to support microservices-based applications, improving system scalability and fault tolerance.
- Configured and managed Kubernetes namespaces to support multiple teams and environments within the organization, enhancing development lifecycle management.
- Implemented message transformation and pipelines using Kafka Streams to manipulate data streams in real-time.
- Good knowledge in Hibernate to facilitate complex database operations and relationships, enhancing application performance and data integrity.
- Implemented the ORM framework using Hibernate 5.0.
- Strong command over SQL and NoSQL databases including MySQL, PostgreSQL, MongoDB, and Cassandra, ensuring efficient data storage and retrieval mechanisms.
- Implemented robust Java applications integrating Apache Cassandra as the primary database, focusing on scalability and high availability.
- Migration of relational databases to Apache Cassandra, resulting in significantly reduced latency and improved performance for real-time data processing applications.
- Used Redis Pub/Sub mechanisms to implement efficient message-queueing systems that supported asynchronous processing and reduced application bottlenecks.
- Strong experience in using RDBMS database like PostgreSQL, handled, and parsed various JSON data in the java.
- Integrated PostgreSQL databases with Java applications using JDBC, Hibernate, or other ORM frameworks to provide seamless data access and manipulation.
- Proficient in cloud computing platforms such as AWS, Azure, and GCP, ensuring high availability and scalability of applications.
- Worked on AWS CloudWatch and AWS ALB for Load balancing and worked on ELB for the performance testing.
- Extensive experience with AWS services including EC2, ECS, EPC, ELB, RDS, SNS, Lambda, S3, RDS, and DynamoDB, for deploying scalable, high-availability applications.
- Experience in deploying, and managing scalable, highly available, and fault-tolerant systems on Azure.
- Strong in Azure Resource Manager (ARM), Azure Virtual Machines, App Services, Azure SQL Database, and Azure Active Directory to design and implement secure and compliant cloud-based solutions.
- Expertise in building and maintaining scalable data pipelines using Azure Data Factory, Azure Databricks.
- Worked on Automated CI/CD workflows using Azure Pipelines, integrating Git repositories for version control.
- Good knowledge of DevOps tools like Docker, Kubernetes, Jenkins, and Maven for efficient build, test, and deployment processes.
- Integrated Docker with Jenkins and GitLab for continuous integration and delivery pipelines, significantly reducing deployment times and manual deployment errors.
- Configured and maintained Docker networks, enabling secure and efficient communication between containers and external networks.
- Employed lazy loading strategies to optimize application performance by loading modules on-demand.
- Worked on Log4J for real-time monitoring and analysis of application logs and Configured Log4j appender to redirect application logs to various destinations.
- Deployed microservices to cloud platforms (AWS, Azure) using infrastructure as code (Terraform, CloudFormation), enhancing scalability and reliability.
- Worked and Planned Delivery Strategy and Rollout Strategy with UAT and Prod Teams.
- Monitored Tomcat server performance using JMX and other monitoring tools.
- Deployed and managed Java web applications on Apache Tomcat 8 servers.
- Implemented continuous integration and deployment pipelines using Jenkins and Maven, improving development efficiency and product quality.
- Experienced in version control systems like Git for efficient collaboration and code management.
- Competent in writing and maintaining unit tests using JUnit, Mockito, and Cucumber for ensuring code quality and reliability.
- Designed and executed Terraform scripts for cross-cloud resource management, facilitating hybrid cloud architectures.
- Implemented CI/CD pipelines using Jenkins, GitLab CI/CD, or other tools to automate the deployment of Terraform-managed infrastructure alongside Java applications.
- Utilized IDEs such as Eclipse, IntelliJ, and VS Code For efficient development and debugging of software projects.

- Extensive troubleshooting and problem-solving skills in client-server and web application environments, ensuring high system reliability and user satisfaction.
- Used Postman and SoapUI to test web services.

TECHNICAL SKILLS

Programming Languages	Java (17, 11, 8, 7), JavaScript, HTML, CSS, SQL, PL/SQL, TypeScript
Java/J2EE Technologies	Servlets, Spring, JPA (Java Persistence API), JTA (Java Transaction API), JDBC (Java Database Connectivity), JSP (Java Server Pages), JSTL (Java Server Pages Standard Tag Library), RMI (Remote Method Invocation).
Frameworks	Spring MVC, Spring Boot, Spring Cloud, Spring Security, Spring Data Spring JPA, Spring Batch, Hibernate ORM, JUnit, Mockito, Cucumber, Angular 13/11/8, React.js, Node.js
Web Technologies	HTML, CSS/CSS3, AJAX, jQuery, Bootstrap, XML, Grunt, Gulp, JSON.
Database	SQL Server, MySQL, Oracle, MongoDB, DB2, NO SQL
JavaScript Frameworks	Angular 13/11/8, jQuery, React.js, Node.js.js, Hapi.js, Handlebars.js.
Web Services	RESTful Web Service, SOAP, JAX RS, JAX WS, Apache Axis
Messaging	JMS, Active MQ, Rabbit MQ, Apache Kafka, Amazon SQS (Simple Queue Service)
Web Application Servers	Oracle WebLogic 10.x/9.x, IBM WebSphere 8.x/6.x, Apache Tomcat 8.0/7.x/6.x, JBOSS
Methodologies	Agile, Waterfall, SCRUM.
Testing Tools	JUnit, Mockito, Selenium, Cucumber. SoapUI, Postman, Cypress, JMeter.
Version Control	SVN, GIT, Bitbucket, GITHUB.
Build Tools	Maven, Gradle, ANT
IDEs	Eclipse IDE, IntelliJ IDEA, Spring Tool Suite (STS), VS Code, NetBeans
Operating Systems	Windows, Linux, and UNIX
Cloud	AWS EC2, Lambda, DynamoDB, AWS Elastic Beanstalk, CloudFront, SNS (Simple Notification Service), RDS, S3, Azure VMs, Azure App Service, Azure Kubernetes Service (AKS), SQL Database, Azure Active Directory (Azure AD), Azure Blob Storage, Azure Service Bus, Azure SQL

EDUCATION DETAILS

- Bachelor of Technology from Amrita Vishwa Vidyapeetham University, Bangalore, India, 2012.

PROFESSIONAL EXPERIENCE

Client: JPMC, Plano, TX

Nov 2022 to Present

Role: Sr. Java Full Stack Developer

Responsibilities:

- Worked in Agile teams, participating in sprint planning, daily stand-ups, and retrospectives to ensure efficient project management and delivery.
- Involved in all the phases of SDLC including Requirements Collection, Design & Analysis of the Customer Specifications and Development of the Application.
- Worked on Spring MVC application framework to create and configure of Java17 beans using Spring OC and Spring Hibernate support.
- Experiences with Core Java 17 with Multithreading, Concurrency, File Handling I/O, Generics, Data Structures and Collections, Garbage Collection.
- Integration of Redis with existing Java applications to support session management and user-specific data caching.

- Designed high-performance web applications using Spring MVC, enhancing user experience through responsive design and RESTful service integration.
- Implemented enhanced security protocols introduced in Java 17, including cryptographic algorithms and APIs.
- Developed Restful APIs and Microservices using spring, Hibernate and Jersey.
- Implemented enhanced security measures provided by Java 17, including cryptographic algorithms and APIs.
- Designed and developed the data modeling using JPA-Hibernate and designed API with Spring implemented Spring Cache.
- Used Spring MVC components to implement business layer and Spring Boot for Microservices.
- Implemented security protocols and OAuth2 integration within Spring Boot applications to secure sensitive financial transactions.
- Integrated Vert.x with Kafka for real-time data streaming and processing, improving overall system responsiveness.
- Optimized Vert.x event loops and thread pools to handle massive concurrency, ensuring smooth application performance.
- Utilized Vert.x web client to consume RESTful APIs and integrate external services seamlessly into banking applications.
- Developed Spring Boot actuator endpoints for health checks and metrics, improving application observability.
- Designed and implemented microservices using Spring Boot, enhancing modularity and scalability.
- Developed comprehensive monitoring and alerting frameworks around Kafka ecosystems.
- Implemented RESTful Web services to retrieve data from the client-side and made REST API calls from React.js.
- Developed Single Page Applications (SPA) using HTML5, CSS3, JavaScript, Bootstrap 4, React.js.
- Worked with React CLI, JSX, and ES6 in React.js to create components and containers for the web pages.
- Optimized the performance of the application using React.js code splitting and server-side rendering.
- Implemented React.js components to maintain each view data. Utilized React.js Hooks for state management and lifecycle methods.
- Tested all application components extensively with React.js built-in testing facilities such as Jest and React Testing Library.
- Developed and optimized microservice using Node.js and ES6 as interfaces to Cassandra NoSQL database.
- Implemented high availability configurations for Kafka and Cassandra to ensure uptime and continuity of service across distributed systems.
- Added dynamic functionality to the application by implementing jQuery, Node.js.
- Modularized front-end CSS and JS code with Sass and Built a real time mouse/click user analytics web service with Node.js.
- Build REST web service by building Node.js Server in the back end to handle requests sent from the front-end jQuery Ajax calls.
- Used Spring Kafka API calls to process the messages smoothly on Kafka Cluster setup.
- Implemented security measures such as SSL/TLS encryption, SASL authentication, and ACL-based authorization to secure Kafka clusters.
- Designed and implemented Redux store with middleware for handling asynchronous actions seamlessly and also worked on Redux Ducks pattern for organizing Redux-related code into modular and reusable slices.
- Worked on Redux Form for managing form state and validation within React applications.
- Implemented end-to-end data pipelines using Kafka Connect for seamless ingestion, transformation, and delivery of data between systems and storage solutions.
- Scaled Microservices, distributed systems and server less applications using Simple Queue Service (SQS)
- Developed PL/SQL batches using Java 17 with connectivity to Oracle for data maintenance and Apache Tomcat 8.
- Developed DAOs (Data Access Object) using Hibernate as ORM to interact with DBMS - MySQL and MongoDB.
- Excellent in deploying the applications in AWS as EC2 instances and created snapshots for the data that had to be stored in AWS S3.
- Designed and implemented OAuth2 authentication flows for securing RESTful APIs accessed by web.
- Secured microservices architecture using OAuth 2.0, implementing OAuth-based security layers to protect APIs.
- Implemented secure practices for handling JWT tokens, including encryption, signing, and storage mechanisms to prevent tampering and unauthorized access.
- Managing the lifecycle of JWT tokens, including token expiration, refreshing, and revocation strategies to maintain security.
- Developed custom OAuth2 filters in Spring Boot for extending authentication mechanisms.
- Generating JWT tokens for secure communication between client and server, as well as implementing JWT verification to ensure the integrity and authenticity of tokens.
- Configured and managed AWS Glacier, to move old data to archives based on retention policy of databases/ applications.
- Implemented AWS Lambda for serverless computing, running code in response to events.
- Configured AWS CloudWatch for monitoring application performance metrics and logs.
- Experienced in scaling PostgreSQL databases to handle increased load and data volume by implementing sharding, partitioning.
- Implemented data warehousing solutions using PostgreSQL, including dimensional modeling, ETL processes.
- Worked on maintaining relational databases using PostgreSQL, ensuring efficient data storage and retrieval.

- Worked with Docker to deploy Microservices in modern containers to increase Isolation.
- Containerized Spring Boot applications using Docker, facilitating consistent deployments across development, testing, and production environments.
- Developed custom tooling and scripts using Docker APIs to automate routine maintenance tasks, improving operational efficiency.
- Developed CI/CD pipelines integrating with Kubernetes for automated build, test, and deployment processes using Jenkins and GitLab CI, increasing deployment frequency and reducing rollback rates.
- Integrated Terraform scripts with cloud-native services like AWS Lambda, S3, EC2 to build resilient and scalable architectures.
- Developed Terraform modules and templates to establish consistent infrastructure patterns across projects.
- Performed daily Night Build & Weekly Build & Release for the product using Ant, Maven build scripts.
- Used Jenkins as the integration tool and improved scalability of applications on cross-platforms.
- Integrated Log4J with Jenkins to collect build logs, providing insights into build trends and developed custom Log4J dashboards to visualize application performance.
- Worked on Log4J to validate functionalities and Mockito for unit testing.
- Used Git to maintain the version of the files and took the responsibility to do the code merges from branch to trunk and create new branches when new feature implementation starts.

Environment: HTML5, CSS3, JavaScript, Bootstrap4 React, Typescript, Java 17, Spring (MVC, Boot, Cloud, Security, Data JPA, Batch), Hibernate, JPA, Jersey, Spring Kafka, JPA-Hibernate, AWS (EC2, S3, Lambda, Glacier), Apache Tomcat 8, JUnit, Mockito, Rabbit MQ, Apache Kafka, Simple Queue Service (SQS), Git, RESTful APIs, Microservices, OAuth2, Docker, Jenkins, Log4J, SQL & PL/SQL, Oracle, MySQL, MongoDB, Kafka ecosystem monitoring, AWS CloudWatch, PL/SQL batches for Oracle, DAOs with Hibernate ORM

Client: State of Texas, Dallas, TX
Role: Sr. Java Full Stack Developer

Aug 2020 to Oct 2022

Responsibilities:

- Involved in analysis, specification, design, implementation, and testing phases of Software Development Life Cycle (SDLC) by using agile methodology.
- Agile and Scrum methodologies, leading to improved project delivery timelines and team collaboration in government software projects.
- Development applications using Java 11, JSP, and Servlets, focusing on performance and security for healthcare services.
- Implemented Spring-based applications, leveraging Spring Boot for microservices architecture, ensuring rapid deployment and modularity.
- Implement and enhance java 11 based multithreading ETL tool for distributing XML data into MySQL database using JPA/Hibernate.
- Implemented the application using Spring IOC, Spring MVC Framework, Spring Batch, Spring Boot and handled the security using Spring Security.
- Worked on Spring boot, Spring Modules (DAO, MVC, Securities, AOP, ORM data) and Java 11 based MVC (Model-View-Controller) framework for the application.
- Involved in migration of legacy systems to microservices architecture, significantly improving scalability and maintainability, utilizing Java 11 and Spring Boot.
- Implemented WebSocket communication with Vert.x for real-time client-server interactions, enhancing user experience in trading platforms.
- Worked on Epsilon Garbage Collector to optimize application performance and resource utilization in Java 11 environments.
- Migrate existing Monolithic architecture to full-fledged Microservices architecture using Spring Boot & Spring Cloud in multiple stages.
- Integrated Spring Security with external identity providers like LDAP, Active Directory, OAuth providers like Google, Facebook, GitHub.
- Implementing JWT-based authentication and authorization mechanisms in Java applications.
- Worked on optimizing JWT token generation, validation, and processing for high-performance and scalable Java applications.
- Experience in writing integration tests for JWT-based authentication and authorization flows, ensuring robustness.
- Implemented monitoring and logging solutions to track JWT token usage, detect suspicious activities, and generate audit trails for security purposes.

- Developed Microservice to provide Restful API utilizing Spring Boot with various frameworks such Hibernate.
- Developed interactive healthcare dashboards using React JS for real-time data visualization of patient metrics and health trends.
- Worked on developing custom security filters and interceptors using Spring Security APIs to implement custom authentication and authorization logic.
- Implemented React JS Controllers to maintain each view data.
- Worked on design and developed web pages using HTML5, CSS3, JavaScript, jQuery, React JS and Bootstrap.
- Integrated React JS with RESTful services for dynamic content updates without reloading.
- Experienced in React JS and working with React Flux architecture and Used React - Router to turn application into Single Page Application.
- Integrated Node.js for server-side logic, enhancing application efficiency and scalability in handling concurrent health service requests.
- Developed server-side APIs for health information exchange using Node.js, optimizing data processing and interoperability.
- Integrated Node.js with RabbitMQ for handling asynchronous messaging in distributed health informatics systems.
- Integrated Node.js applications with NoSQL databases like MongoDB and Cassandra, enabling seamless data storage and retrieval for high-volume transactional systems.
- Designed and implemented microservices architecture using Node.js and Docker, facilitating seamless communication between front-end and back-end systems, enhancing scalability.
- Implemented RabbitMQ for asynchronous message queuing, facilitating reliable communication between microservices in healthcare systems.
- Worked on scalable cloud solutions on Azure using Azure Kubernetes Service (AKS) for container orchestration, enabling seamless scaling.
- Implemented Azure Active Directory (AAD) for robust identity and access management across cloud-based health applications, and on OAuth 2.0 and OpenID Connect for secure authentication and authorization workflows.
- Monitoring, and managing Kafka clusters using tools such as Kafka Manager, Confluent Control Center.
- Designed and implemented Kafka-based integration solutions to facilitate communication between microservices and applications.
- Created monitoring dashboards, alerting rules, and automated remediation scripts for Kafka clusters using monitoring tools.
- Implemented Azure Blob Storage and Azure SQL, applying encryption, access management, and compliance standards. Enhanced data security.
- Optimized data access and manipulation in MySQL and Oracle DBs using Hibernate, improving application performance.
- Used Hibernate caching strategies to minimize database hits, reducing latency in patient data retrieval.
- Stored the data in an Apache Cassandra Cluster Used Impala to query the Hadoop data stored in HDFS.
- Maintained PostgreSQL databases for storing large volumes of patient data, ensuring data integrity and security.
- Managed SQL databases (MySQL, PostgreSQL, Oracle) and NoSQL databases (DynamoDB, MongoDB, Cassandra), ensuring robust data storage solutions.
- Implemented Oracle RAC for high availability and disaster recovery.
- Used OpenShift's auto-scaling features to handle variable loads in health monitoring applications, ensuring high availability.
- Developed CI/CD system with Jenkins on Kubernetes environment, utilized Kubernetes and Docker to build, Test and Deploy.
- Created containers using Docker and Kubernetes, streamlining deployment and scaling of applications across development environments.
- Used Apache Camel for routing the exchanges between different systems.
- Developed dynamic web pages for healthcare management systems using Java Server Pages (JSP), enabling real-time updates.
- Utilized JUnit, Mockito, and Cucumber for comprehensive testing, ensuring high-quality and reliable healthcare application functionalities.
- Use the JIRA tool for tracking new requirements, enhancements, bugs, and Git for version control.

Environment: React JS, HTML5, CSS3, JavaScript, jQuery, Bootstrap, Java 11, JSP (Java Server Pages), Servlets, Spring (IOC, MVC Framework, Boot, Batch, Security), Node.js, Azure Kubernetes Service (AKS), Azure Active Directory (AAD), Azure Blob Storage Azure SQL, Junit, Mockito, Cucumber, Rabbit MQ, Apache Camel, Git, Spring Cloud, Microservices Architecture, Hibernate, OAuth 2.0

OpenID, Connect , MySQL, Oracle DB, PostgreSQL, DynamoDB, MongoDB, Cassandra, Oracle RAC, OpenShift, Jenkins, Docker, Apache Kafka

Client: Blue Cross and Blue Shield, Dallas, TX.

June 2018 to July 2020

Role: Java Full Stack Developer

Responsibilities:

- Involved in all phases of the Software Development Life Cycle (SDLC) using Agile Scrum methodology.
- Worked on Angular 11 frameworks to develop dynamic and interactive user interfaces for medical insurance applications, enhancing user experience and engagement.
- Designed, developed, and implemented Responsive UI for content region layouts in the new Confidential using HTML5, CSS3, Bootstrap UI, Angular 11, jQuery, Ajax and JSON.
- Experience with Java 8 features such as Stream API, Lambda Expressions, Functional Interfaces, and Optional classes to enhance code readability and efficiency.
- Worked on Java 8's Completable Future alongside Spring asynchronous capabilities to build non-blocking, highly scalable web services.
- Java 8 Stream API for collection processing and operations, enhancing the application's data manipulation capabilities.
- Implemented robust RESTful APIs and web services using Java 8, improving application interoperability and performance across diverse client platforms.
- Integrated Spring MVC with Hibernate for robust backend development, streamlining patient record management and appointment scheduling systems. Implemented Spring Security and OAuth for secure authentication and authorization in healthcare applications.
- Developed the backend of the application using Spring Boot and handled the authentication, authorization, and access-control features by using Spring Security.
- Used Spring Dependency Injection, Spring MVC components, Spring Annotations, and other Spring Modules to implement the middle layer and navigation part of the application.
- Designed and developed the REST based Micro services using the Spring Boot
- Designing and developing Restful API and services using best practices to interact within the Microservices and with the front end. Using spring MVC and spring rest.
- Used Node Package Manager (NPM) for installing required Node modules and other Angular 11 NPM modules.
- Implemented Service Oriented Architecture (SOA) based RESTful Web services and made REST API calls from Angular 11, parsing the data to the client.
- Created RFP Micro service to provide RESTful API utilizing Spring Boot with Microservices.
- Developed Single Page Application (SPA) using Angular 11, TypeScript, Angular CLI, HTML5, CSS3, jQuery, JavaScript, and Bootstrap.
- Worked on optimizing JWT token generation, validation, and processing for high-performance and scalable Java applications.
- Integrated JWT tokens with OAuth 2.0 authorization framework, facilitating interoperability with third-party identity providers.
- Implemented authentication and authorization features using Angular 11 guards to enhance application security.
- Worked on the modernization of a legacy and outsourced UI. Technologies used were AngularJS, Node.js and jQuery.
- Experience in using JSP and Servlets to create web interfaces and integrating Apache tools like Kafka.
- Used Apache Kafka in cluster as messaging system between the APIs and Microservices.
- Implemented a micro service to ingest this data from log stash using separate Spring profile for Kafka.
- Experience in deploying Kafka clusters in enterprise environments, including on-premises, cloud-based, and hybrid deployments.
- Executed MongoDB scripts to insert and update NoSQL database, automating data changes and reporting.
- Developed services for the secure storage and retrieval of user data utilizing Oracle, enhancing the application's functionality across various microservices.
- Automated cloud deployments and infrastructure management using AWS CloudFormation and Terraform, improving deployment efficiency and system reliability.
- Changing the AWS infrastructure Elastic Beanstalk to Docker with Kubernetes.
- Worked on AWS Cloud watch and AWS ALB for Load balancing and worked on ELB for the performance testing.
- Automated CI/CD pipelines using Jenkins, Maven, and Git, incorporating Docker for containerization and Kubernetes for orchestration, significantly improving deployment frequency and stability.
- Used Maven for project management and created JAR files, deployed them on the WebLogic server.
- Involved in creating JUnit, Mockito-based unit test cases as the mocking technique for the objects under test.

- Used Postman and SoapUI to test web services and Implemented OAuth 2.0 token-based authentication, and authorization.
- Managed source code and collaborated across large development teams using Git, facilitating efficient version control and code review processes.

Environment: Angular 11, HTML5, CSS3, Bootstrap UI, jQuery, Ajax, JSON, TypeScript, Angular CLI, Java 8, Spring (MVC, Boot, Security, Dependency Injection, Annotations), Hibernate, Node.js, AWS (CloudFormation, Elastic Beanstalk, CloudWatch, ALB, ELB), Docker, Kubernetes, JUnit, Mockito, Postman, SoapUI, OAuth 2.0, RESTful APIs, Apache Kafka, Spring REST, Git, Oracle, MongoDB, Maven, Jenkins, Terraform.

Client: Oak Street Health, Chicago, IL.

Aug 2016 to May 2018

Role: Java Full stack Developer

Responsibilities:

- Used agile methodology to develop user interaction forms and created use cases and sequence diagrams to assist in application design.
- Worked on Agile methodology including team-based design and code reviews.
- Involved in design and development of front end/back-end API using Java8, TypeScript, JavaScript, JSP and also in Analysis, Design, Development, and Testing phases of various modules.
- Worked on spring modules like Dependency Injection (DI), Aspect Oriented Programming (AOP), and Spring Boot, Spring JMS, Spring Integration, and Apache Wicket framework.
- Used SPRING ORM module for integration with Hibernate for persistence.
- Implemented Java8 Servlets and JSP for dynamic web content generation, facilitating efficient server-client communication.
- Implemented Spring MVC to develop RESTful web services, enabling efficient request handling and response management.
- Integrated Hibernate in Spring applications for ORM, simplifying database operations.
- Implemented Hibernate caching to optimize database query performance, reducing the load on the database server.
- Worked on Spring Boot for creating microservices that handle various healthcare services.
- Developed scalable front-end user interfaces using JavaScript, HTML5, CSS3, Node.JS, React.JS.
- Created modular and reusable React components and services, emphasizing code maintainability and scalability.
- Used React Virtual DOM to optimize rendering performance of large datasets in healthcare management systems.
- Integrated React with RESTful APIs for dynamic content updates, facilitating seamless data exchange between the client and server.
- Utilized Node.js and RabbitMQ for building microservices-based architectures, enhancing application scalability and reliability.
- Implemented JWT and OAuth2 for secure authentication and authorization in Node.js applications, ensuring data privacy and security compliance.
- Implemented Java8 Servlets and JSP for dynamic web content generation, facilitating efficient server-client communication.
- Worked on Java's Exception Handling mechanisms to build robust error management systems.
- Used advanced Java 8 concurrency and multithreading features to optimize data processing tasks, improving application performance.
- Developed and optimized a series of high-traffic web applications, using Java 8 features like streams and lambda expressions.
- Designed and deployed scalable cloud solutions on Azure, leveraging Azure Kubernetes Service (AKS) for efficient container orchestration.
- Utilized Azure SQL Database for reliable, scalable, and secure database services.
- Integrated Azure Logic Apps to automate workflows, connecting apps, data, and services across both cloud and on-premises environments.
- Implemented Azure Active Directory (AAD) for secure identity and access management.
- Worked on Azure App Services, Azure SQL Database, and Azure Active Directory for maintaining secure, scalable cloud Infrastructure.
- Involved in optimization of Java applications on Azure, utilizing Azure Monitor and Application Insights for in-depth analytics.
- Worked on Oracle DB features such as partitioning and indexing to improve query performance and scalability.
- Optimized PL/SQL stored procedures and functions for complex data processing, enhancing application functionality.
- Automated cloud infrastructure provisioning using Terraform, applying Infrastructure as Code (IaC).

- Used Ant tool to build & deploy the application on the server.
- Integrated Docker with Jenkins for CI/CD pipelines, automating the build, test, and deployment process for healthcare applications.
- Integrated Kubernetes with Azure AKS for seamless cloud-based container orchestration, benefiting from cloud scalability and managed services.
- Integrated Terraform with Azure DevOps pipelines, streamlining infrastructure deployment and application delivery.
- Utilized jQuery for form validation and data manipulation.
- Implemented Servlet filters and listeners for request preprocessing, logging, and session management, enhancing the security.
- Integrated GIT with Jenkins for CI/CD, streamlining the build, test, and deployment process, significantly reducing time to deployment.

Environment: JavaScript, HTML5, CSS3, Node.JS, React.JS, Java 8, Spring (MVC, Boot, JMS, Integration), Apache Wicket, Hibernate, Servlets, JSP, TypeScript, Azure, Azure Kubernetes Service (AKS), Azure SQL Database, Azure Logic Apps, Azure Active Directory, RabbitMQ, GIT, Oracle DB, PL/SQL, Terraform, Ant, Docker, Jenkins, jQuery.

Client: American Express, New York, NY.

Oct 2013 to July 2016

Role: Java Full Stack Developer

Responsibilities:

- Development of secure financial transaction systems using Java 8, Spring Boot, and Spring Security, implementing OAuth2 for authentication.
- Developed new features for highly concurrent, multi-threaded microservice applications that run on Tomcat in a Linux cloud environment using Java 8, MongoDB.
- Developed the spring boot applications using Java 8 using the advanced version of Eclipse IDE which is Spring Tool Suite (STS) and Maven as the build tool.
- Worked on Spring Cloud for building a configuration server, enabling centralized management of microservices configurations across environments.
- Developed RESTful services using Spring Boot, facilitating seamless integration with the front-end.
- Employed AWS for automated scaling and management of application containers.
- Developed Single Page Applications (SPA) using Angular 8, Typescript, HTML5, CSS3, and Bootstrap.
- Utilized API gateways for managing, securing, and orchestrating microservices communications.
- Integrated Angular 8 applications with backend microservices via RESTful APIs, providing seamless end-to-end functionality for users.
- Maintained a high-volume payment gateway integrating Spring IOC for dependency management.
- Deployed and managed applications on AWS EC2, enabling auto-scaling and load balancers to handle fluctuating workloads efficiently.
- Configured AWS S3 buckets for secure storage of transaction logs and financial reports.
- Used NoSQL databases like MongoDB and Cassandra for handling unstructured data, improving flexibility and scalability of logging.
- Designed and implemented data models in NoSQL databases (DynamoDB, MongoDB, Cassandra) for scalable storage of unstructured data.
- Automated CI/CD pipelines using Jenkins, Maven, and GIT for efficient code integration, testing, and deployment, significantly reducing release cycles.
- Extensively used Docker to enable faster and consistent deployments.

Environment: HTML5, CSS3, Bootstrap, Java 8, Spring Boot, Spring Security, Spring Cloud, OAuth2, RESTful Services, AWS EC2, AWS S3, Automated Scaling, Load Balancers, Junit, Mockito, Spring IOC, API Gateways, GIT, MongoDB, Cassandra, DynamoDB, Maven, Jenkins, Docker.

Client: Reliance Nippon Life Insurance, Pune, India.

Dec 2012 to Sep 2013

Role: Java Developer

Responsibilities

- Work with Agile software lifecycle methodologies. Create design documents when and as required. Perform coding, debugging, and testing.
- Employed Java features to improve application robustness and performance.
- Engaged in front-end development using HTML, CSS, JavaScript creating responsive and user-friendly interfaces.
- Good Knowledge in coded Java applications on both client-side and server-side using JDBC and advanced Multithreading.
- Collaborated with cross-functional teams, including QA, front-end developers, and product managers, to ensure high-quality software solutions.
- Experience with Java features such as lambda expressions, Parallel operations on collections, and for effective sorting mechanisms and new Date Time API.
- Used Jenkins for continuous integration and continuous deployment (CI/CD) pipelines, automating build, test, and deployment processes.
- Involved in component development and used design patterns such as Singleton, Factory and Data Access Object (DAO) in the implementation of the application.
- Used Spring Context for EJB Support and Spring DAO for enhanced JDBC and DAO support.
- Worked on Spring AOP and Dependency Injection.
- Worked on Eclipse IDE for development, configured and deployed the application on to WebLogic using Maven.

Environment: Java, Spring, Hibernate, HTML, CSS, JavaScript, Junit, JBOSS, SVN, Log4j

Education:

Bachelor's degree in Electronics and Communication Eng from Amrita Vishwa Vidyapeetham University in 2012
